Oriole “Learning Page”!

Check out these photos to learn more about the Orioles that nest in Mid– Missouri. Be sure to download our Educational Brochure

“ Orioles: Spring and Summer!” from the *Educational Page of our website.*

Adult Female & Male Baltimore Orioles

Left: Note the amount of black on the tail feathers of the male Baltimore compared to the female. Look closely and you will see the “orange corners” on the tail of the male (even more conspicuous in the photo lower left) Also note the bright orange **over the shoulder** on the male. The female displays a light colored belly/side as compared to the adult male. Females can have varying amounts of black on their heads; some will be almost as black as adult males.

Left: Adult male Baltimore Oriole eating suet.

Right: First Spring male Baltimore Oriole .

Female Baltimore Oriole gathers Mealworms to feed young
